MGC Ecofacility Co., Ltd. Established as Part of MGC's

Mitsubishi Gas Chemical Company, Inc. (Head Office: Tokyo; President: Akira Ohira; hereafter referred to as MGC) has established MGC Ecofacility Co., Ltd. at its Tokyo Plant located in Katsushika-ku, Tokyo. The new company will provide environmental support for MGC's operations.

As the local environment surrounding the Tokyo Plant has changed, the plant has also been transforming itself into an "urban factory" to accommodate an increasingly sustainable and recycling-oriented society. The plant has already decreased environmental impact by transferring the manufacture of chemically processed products to other plants, and has also substantially reduced the use of energy and resources such as water.

The role of the new company will be to address environmental issues and contribute to the development of an eco-friendly environment not only through sustainable activities such as recycling and planting trees, but also by single-handedly providing environmental infrastructure, maintenance and management for all the operations conducted at the Tokyo Plant, while also promoting resource conservation, reduced environmental impact, and the commissioning of plant operations. In the future, the company will focus on the development of environmentally friendly and recycled products.

Profile
