

Mitsubishi Gas Chemical Company, Inc.

April 15, 2011

Supply of Super-pure Hydrogen Peroxide

The following is a report on the current and future supply of super-pure hydrogen peroxide from Mitsubishi Gas Chemical Company, Inc. (MGC) following the major earthquake that hit Eastern Japan on March 11, 2011.

In its March 18, 2011 report, "Situation at the Kashima Plant and the Impact on the Manufacture of Products at the Plant," MGC announced that it would limit the shipment of super-pure hydrogen peroxide. Fortunately, the company is now convinced that it will be able to postpone the limitation of shipment, initially scheduled for mid-April, until early May. At the same time, it will be possible to ease the quantitative restriction.

The above measures reflect the company's positive prospects. With the assistance and understanding of its customers, MGC expects that the current product inventories, company plans for the future procurement of products and raw materials, and the scheduled restart of partial production at the Kashima Plant will make it easier to supply super-pure hydrogen peroxide.

MGC will continue to make every effort to restore operations at the Kashima Plant.
