#### A MITSUBISHI GAS CHEMICAL

#### **Environmental Reports (Fiscal 2021 Results)**

Climate change and other global-scale environmental issues have gained much attention in recent years.

The MGC Group recognizes that not only do its business activities place a burden on the environment, but that environmental problems have a significant impact on its business activities, and is engaged in a variety of initiatives to address them.

> Environmental Management

Response to Climate Change(Disclosure Based on the TCFD Recommendations)

> Greenhouse Gas Emission Reduction

> Water Resource Conservation

> Waste Reduction and Resource Recycling

> Chemical Emission Reduction

> Pollution Prevention

> Biodiversity Conservation

#### **Scope of This Report**

The scope of information tabulated in this report is classified as follows.

Designation	Scope (energy usage, GHG emissions)	Scope (other than items to the left)
MGC (Non-consolidated)	Mitsubishi Gas Chemical Company, Inc.	Mitsubishi Gas Chemical Company, Inc.
Consolidated subsidiaries	Main companies engaged primarily in manufacturing among consolidated subsidiaries	-
Domestic MGC Group	-	Those domestic subsidiaries which are members of the MGC Group Environment and Safety Council*
Overseas MGC Group	-	Those key overseas subsidiaries which are primarily involved in manufacturing
MGC Group	MGC (non-consolidated) and consolidated subsidiaries	Non-consolidated MGC, along with domestic and overseas MGC Group companies as noted above

Domestic MGC Group companies whose fiscal 2021 results are included in the scope of reporting (members of the MGC Group Environment and Safety Council\*)

Eiwa Chemical Industry Co., Ltd.

Fudow Co., Ltd.

Japan Finechem Co., Inc.

Japan U-PiCA Co., Ltd.

JSP Corporation

MGC Advance Co.,Ltd.

MGC Ageless Co., Ltd.

MGC Electrotechno Co., Ltd.

MGC Farmix Co.,Ltd.

MGC Filsheet Co., Ltd.

MGC Terminal Company, Inc.

MGC Woodchem Corporation

Shin Sanso Kagaku Co.

TOHO EARTHTECH,INC.

Toyo Kagaku Co., Ltd.

Yonezawa Dia Electronics Co., Inc

Overseas MGC Group companies whose 2021 results are included in the scope:

AGELESS (Thailand) Co., Ltd.

Brunei Methanol Co. Sdn. Bhd.

Korea Engineering Plastics Co., Ltd.

MGC Advanced Polymers, Inc.

MGC Electrotechno (Thailand) Co., Ltd.

MGC Pure Chemicals America, Inc.

MGC Pure Chemicals Singapore Pte. Ltd.

MGC Pure Chemicals Taiwan, Inc.

Mitsubishi Gas Chemical Engineering-Plastics (Shanghai) Co., Ltd.

PT Peroksida Indonesia Pratama

SamYoung Pure Chemicals Co., Ltd.

TAIXING MGC LINGSU CO., LTD.

Thai Polyacetal Co., Ltd.

Thai Polycarbonate Co., Ltd.

#### \* MGC Group Environment and Safety Council:

MGC Group companies in Japan that manufacture and process chemical substances and resins as raw materials and MCG undertake environmental and safety activities in accordance with Responsible Care through the MGC Group Environment and Safety Council.

The Council holds the MGC Group Environment and Safety Council Meeting twice each year to raise the levels of environmental and safety measures by developing annual plans for the environmental and safety activities of each company, conducting PDCA on the results, and reporting on and exchanging information concerning the status of accidents and disaster and other topics.

#### **Tabulation Period for this Report**

The tabulation periods for this report are as follows.

Designation	Scope (energy usage, GHG emissions)	Scope (other than items to the left)
MGC (Non- consolidated)	April – Following March (expressed as a fiscal year)	April-following March (listed as fiscal year)
Consolidated subsidiaries	For Japan, April to the following March; for overseas, January to December	-
Domestic MGC Group	-	April- following March (listed as fiscal year)
Overseas MGC Group	-	January – December**

<sup>\*\*</sup> In the stacked bar chart, figures tabulated by calendar year are accumulated directly on the fiscal year graph.

# Number of Companies and Locations Tabulated for This Report (Only Items Other Than Energy Usage and GHG emissions)

The number of companies and locations tabulated for this report is as follows:

Fiscal	MGC ( consoli		Domestic MGC Group		Overseas MGC Group		Total (MGC Group)	
year***	Number of Companies	Number of Locations						
2016	1	13	12	34	14	16	27	82
2017	1	13	13	36	14	16	28	84
2018	1	13	12	34	14	16	27	82
2019	1	14	16	45	14	18	27	85
2020	1	13	13	37	14	18	28	68
2021	1	13	16	45	14	18	31	76

<sup>\*\*\*</sup> Overseas MGC Group tabulated by calendar year.

#### Calculation of estimated amount of added value

What is estimated amount of added value?

- Test calculations were conducted on the "intensity of amount of added value" with the aim of understanding changes in added value created by MGC and the MGC Group against the intensity of environmental impacts. The "amount of added value" indicates the amount of value generated through manufacture, services, and similar.
- Amount of added value is generally found using the following formulas.
   [Deductive method]
  - Amount of added value = net sales external purchases figure (material costs, purchased parts costs, freight costs, external processing costs, etc.)

    [Additive method]
  - Amount of added value = ordinary income + personnel costs + rental costs + depreciation and amortization + financial costs + taxes and public dues
- As this information includes figures which are not made publicly available, direct calculations are difficult.
- Meanwhile, as the ratio of added value per chemical industries company is published in the "Tabulated statistical overview—definite reports (data)" (appendix table 7) in the Ministry of Economy, Trade and Industry's Basic Survey of Japanese Business Structure and Activities, estimated added value was calculated with reference to this information.
  - > https://www.meti.go.jp/statistics/tyo/kikatu/index.html (in Japanese only)

#### All chemical industries: ratio of added value per company (%)

Fiscal year	2016	2017	2018	2019	2020	2021
Value added ratio	26.8	26.9	25.9	26.3	27.4	-

#### Calculation of estimated amount of added value

Relational expression of net sales and amount of added value
 The estimated amount of added value was calculated from "amount of added value = net sales X value added ratio"

#### MGC (non-consolidated) / MGC (consolidated)

Fiscal year	2016	2017	2018	2019	2020	2021	
Net sales (non- consolidated)	(Billions of yen)	299.2	364.4	375.1	351.3	344.9	427.9
Net sales (consolidated)	(Billions of yen)	556.5	635.9	649.0	613.3	595.7	705.7
Value added ratio (chemical industries)	(%)	26.8	26.9	25.9	26.3	27.4	27.4
Estimated amount of added value (non-consolidated)	(Billions of yen)	80.2	98.0	97.2	92.4	94.5	117.3
Estimated amount of added value (consolidated)	(Billions of yen)	149.1	171.1	168.1	161.3	163.2	193.3

<sup>\*</sup> In the case of fiscal years for which the Ministry of Economy, Trade and Industry has not released statistics, the value-added ratio of the previous fiscal year is used.

#### **Environmental Management**

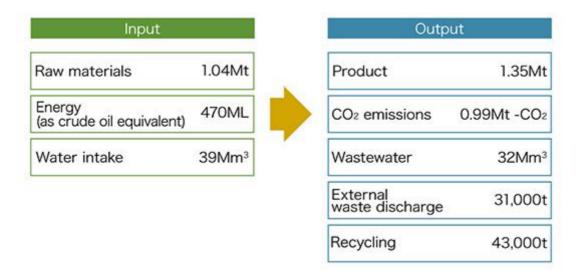

### **Environmental Management System (ISO14001)** (Non-consolidated)

All MGC plants have obtained Environmental Management System registration (ISO14001).

		ISO14001 Registra	ation Date
Plant Registered	Registration Number	(1996 version)	(2015 version)
Niigata Plant	1162-1998-AE-KOB-RvA	June 1998	November 2017
Mizushima Plant	JCQA-E-0145	May 2000	May 2018
Yokkaichi Plant Naniwa Plant Saga Plant	JQA-EM0502	August 1998 (As the Yokkaichi Plant)	August 2017
Kashima Plant	JQA-EM0345	February 1999	January 2018
Yamakita Plant	JQA-EM0859	May 2000	May 2018

#### Production-related Input and Output (Nonconsolidated MGC and Domestic MGC Group)

Primary production-related inputs and outputs for the non-consolidated MGC and domestic MGC Group in fiscal 2021 were as follows:

### **Environmental Preservation Investments (Non-consolidated)**

In fiscal 2015, MGC began undertaking environmental preservation investments. These investments include investment items that, although they may be very effective in reducing environmental loads, may be less likely to be adopted due to long payback periods or for other reasons, as well as investment items that lead to preservation of biodiversity, recruited through proposals from the various MGC sites. A secretariat consisting of the Environment, Safety and Quality Assurance Division and the Production Technology Division at corporate headquarters then select the items to implement and secure the required budget, before executing the investment.

For example, by replacing mercury lamps and fluorescent lights with LED bulbs, it is possible to both save energy and reduce mercury-containing equipment. Replacing air conditioning equipment with energy-saving models has the dual effect of conserving energy and reducing CFCs (thus preventing destruction of the ozone layer). Further,

replacing the equipment with air conditioners that do not use freon as a refrigerant can obtain the additional effect of reducing greenhouse gases.

In fiscal 2021, MGC reduced energy consumption by installing power factor improvement capacitors, installed solar power generating facilities on plant warehouses, cut energy usage by updating temperature control equipment in research lab dry rooms, and took other measures. These steps had the effect of reducing GHGs by about 342 t-CO<sub>2</sub>/year on a pro forma basis.

MGC is committed to continued investment in reducing environmental impact.

#### **Environmental Accounting (Non-consolidated)**

Through environmental accounting in accordance with guidelines by the Ministry of the Environment, MGC has quantitatively calculated and released the investment amount and costs of environmental preservation required for the business activities of non-consolidated, as well as the real economic benefits obtained.

- Investment amount
  - The total amount of investment related to environmental preservation activities in fiscal 2021 was approximately 1.9 billion yen. The main investments were R&D investment relating to circular carbon methanol (CCM) production and updating compressors at the Yokkaichi Plant.
- Expenses
  - Total expenses related to environmental conservation activities in fiscal 2021 were approximately 9.9 billion yen. Of these, the highest expense was about 2.8 billion yen for research and development, accounting for around 28% of the total.
- Economic benefits
  - The reduction of expenses through energy saving measures and the income from the sale of unneeded items generated in our business activities were recorded as real economic benefit.

### **Environmental Preservation Cost (Investments and Costs Classified According to Business Activity)**

	Breakdown		Main areas of activity	FY20 (millions		FY2021 (millions of yen)	
Breakdown		main areas or activity	Investment	Expenses	Investment	Expenses	
		Air pollution prevention	New installation of vent exhaust gas treatment facilities, exhaust gas treatment expenses	95.1	878.3	71.7	858.8
Onsite cost	Pollution prevention cost	Water pollution prevention	Installation of equipment for reducing drainage volume, updating of aging facilities	178.1	1,560.5	144.0	1,666.8
COST		Soil, Noise	Measures to prevent soil penetration	358.8	0.1	19.5	2.7
	Global environmental preservation cost		Updating compressors, updating air conditioning equipment	191.8	1,871.9	499.4	2,172.7
	Resource recycling cost		Recycling of waste	6.0	1,143.4	0.4	819.3
Up	or down stre	am cost	Collection and reuse of product containers	0.0	39.8	3.8	111.7
Mar	Management activity cost		Greening of surrounding areas, environmental-related analysis, disclosure of environmental information	40.9	547.0	1.3	1,391.1
R&D cost		Research and development of energy-saving technologies and ecofriendly products	442.0	2,747.6	1,188.6	2,826.0	
Social contribution cost		Membership dues of nature conservation organizations, donations of books	0.0	6.8	0.0	4.7	
Envir	onmental daı	mage cost	Pollution impacts levy	0.0	70.7	0.0	75.0
		Total		1,307.7	8,866.0	1,928.7	9,928.7

#### **Economic benefit**

Title	Item	FY2020 (millions of yen)	FY2021 (millions of yen)
Income	Profit on sale of valuable waste, etc.	47.8	7.6
Reduction of expenses	Effects due to energy saving, power savings from solar power generation	110.8	74.4

Compliance with the Ministry of the Environment's Environmental Accounting Guidelines 2005

Period: From April 1, 2021 to March 31, 2022

Scope: Non-consolidated

**Methods**:Investments were apportioned according to the ratio of the approved or enforced amount of capital expenditure to environmental preservation.

Expenses were apportioned according to the ratio of expenses related to environmental preservation and include depreciation allowance.

#### A MITSUBISHI GAS CHEMICAL

# Response to Climate Change (Disclosure Based on the TCFD Recommendations)

In May of 2019, MGC declared its support for the recommendations of the Task Force on Climate-related Financial Disclosures (the "TCFD").

Tackling climate change is a major challenge that calls for initiatives on a global scale if we are to achieve a sustainable society. MGC recognizes that solving energy and climate change problems is an important issue, and is working to solve these issues in terms of both mitigating and adapting to climate change.

Specifically, MGC has formulated targets for reducing Scope 1 and 2\*1 greenhouse gas (GHG) emissions and is working toward their steady reduction. At the same time, MGC is proactively disclosing information on Scope 3\*2 GHG emissions and is taking action to reduce them in collaboration with its suppliers. MGC is working to improve energy efficiency and the carbon cycle of raw materials, and to promote energy transition toward the goal of achieving a zero-carbon society by 2050. MGC will also contribute to solving energy and climate change problems through business operations by deploying innovative process technologies and factoring whole-lifecycle GHG emissions into its design and development processes.

In March 2021, MGC announced a new objective for achieving carbon neutrality by 2050 with the goal of limiting the increase in average temperature to below two degrees Celsius. MGC encourages the building of energy systems to achieve carbon neutrality, and aims to expand the range of products conducive to carbon neutrality.

<sup>\*1</sup> Scope 1 emissions are GHG emissions directly generated by MGC. Scope 2 emissions are indirect GHG emissions associated with the use of energy (mainly electric power) purchased from external suppliers.

<sup>\*2</sup> Scope 3 emissions are indirect GHG emissions generated in supply chains through organizational activities such as raw material sourcing, manufacturing, distribution, sales and waste disposal.

#### 1. Governance

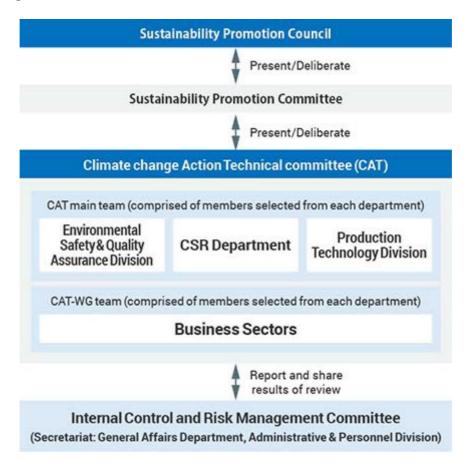

The Sustainability Promotion Council, composed of directors and chaired by the President, deliberates and makes decisions on addressing climate change risk and other key Sustainability issues (materiality). Important matters to be deliberated at the Sustainability Promotion Council is resolved by the Board of Directors.

The participation of corporate sector heads on the Sustainability Promotion Committee, an advisory body to the Sustainability Promotion Council, ensures key Sustainability issues are adequately deliberated.

To develop a response to climate change, MGC has established the Climate change Action Technical committee, a Sustainability Promotion Expert Committee that advises the Sustainability Promotion Committee. As the administrative office for dealing with TCFD and CDP requirements, the Climate change Action Technical committee promotes cross-business initiatives.

Long-term objectives for reducing GHG emissions have been incorporated in the Medium-Term Management Plan, with management taking a leading role in their implementation.

#### Climate Change Governance Structure

### 2. Strategy: Responding to Climate Change Risks and Opportunities

#### Assumptions behind scenario analysis for fiscal 2021

- · Evaluation points: 2030,2050
- Scenario: Increased temperature
   Main external information referred to in decarbonization scenario
- IEA WEO 2021 SDS (World gradually reducing emissions to keep global increase in average temperature to less than 1.5°C)
- SSP1 (Rapid development progressing on low-income countries, global economic inequality being resolved, and technological development advancing rapidly)

Main external information referred to in baseline scenario

- IEA WEO 2021 STEPS (World in which average temperature increases by approximately 2.6°C in around 2100 due to course of emissions according to plans announced by each country at present)
- SSP2 (Growth anticipated to between that of SSP3 with little international cooperation, little
  investment in technological development, and slow economic growth and that of SSP1 scenario of
  decarbonization)
- · Analysis scope: Polycarbonate and MXDA businesses
- Conduct a quantitative assessment of the financial impact of risks and opportunities in the existing business portfolio and draft a response strategy

#### **Evaluation Results**

	Risks and Opportunities  ( □ Risks ○ Opportunities)	Main Initiatives
Risks and opportunities in decarbonization scenario	□ Strict regulations such as carbon tax □ Shift to renewable resources □ Popularization of biomass plastics ○ Reduction of fossil resource prices due to shift from fossil resources □ Rapid advancement of technological development ○ Popularization of renewable energy ○ Increase in demand for lighterweight auto bodies	<ul> <li>Further improve energy use efficiency and develop decarbonization processes</li> <li>Decarbonize raw fuels</li> <li>Develop decarbonized products</li> <li>Develop new products that meet the needs of a decarbonized society</li> </ul>

	(	Risks and Opportunities  ☐ Risks ○ Opportunities)	Main Initiatives
Risks and opportunities in baseline scenario		Increased fossil resource prices due to dependence on fossil resources Slowing of increase in demand for infrastructure such as renewable energy	<ul> <li>Transition from fossil resources</li> <li>Increase rate of recycled materials</li> <li>Bring higher added value to products</li> </ul>

#### 3. Risk Management

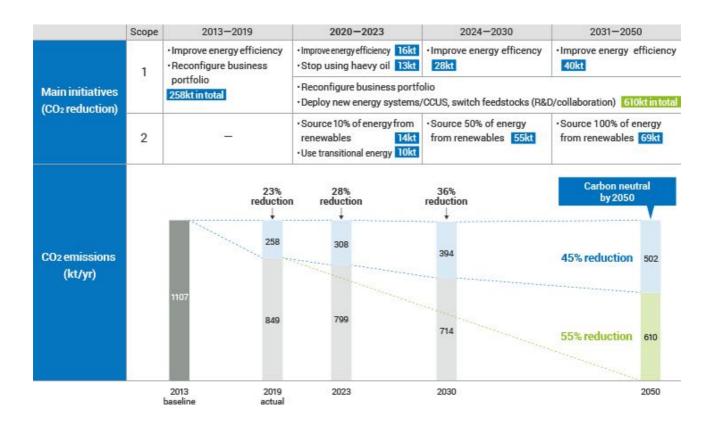

MGC has identified key issues (materiality) related to the environment, society and governance, and manages risk through cross-company materiality management. One material issue that has been identified as extremely important from the perspective of stakeholders and MGC itself is a proactive response to environmental problems. MGC intends to take the initiative on this issue, a requirement for continuing our business operations and activities.

To gain a quantitative understanding of climate change risks, in April 2021 MGC introduced an internal carbon pricing system. In capital investment plans involving an increase or decrease in CO<sub>2</sub> emissions, the cost or effect of applying and converting the internal carbon price (10,000 yen/MT-CO<sub>2</sub> equivalent) will be used to help make investment decisions, promote CO<sub>2</sub> emissions reductions, and encourage the creation of technologies and products that contribute to building a low-carbon society.

#### 4. Indicators and Objectives

MGC has established long-term objectives for reducing GHG emissions as it works toward achieving carbon neutrality by 2050. To achieve these objectives, MGC has established key performance indicators (KPIs) for GHG emissions and GHG emissions intensity. We are moving forward with short, medium and long-term emissions reduction strategies that include promoting energy savings activities, deployment of renewable energy, and Circular Carbon Methanol production.

# Long-term GHG Emissions Reduction Targets 2023 target: 28% reduction from FY13 baseline 2030 target: 2050 target: carbon neutrality

#### **Greenhouse Gas Emission Reduction**

MGC considers risks associated with climate change to be an important business issue. It is moving forward with efforts to reduce emissions of greenhouse gas (GHG) and to reduce the negative impact of climate change on its business.

At the same time, new needs in society associated with climate change also represent a business opportunity. MGC recognizes that contributing to the achievement of a sustainable society through its products and technologies is an important issue.

#### **Basic Approach to Climate Change Mitigation**

- 1. Formulate targets for reducing Scope 1 and 2\*1 GHG emissions and steadily reduce them through planning, execution, monitoring and reassessment.
- 2. Assess, manage, monitor and proactively disclose Scope 3\*2 GHG emissions and take action to reduce them in collaboration with suppliers.
- 3. Improve energy efficiency and raw materials' carbon cycle and promote energy transition toward realization of a zero-carbon society by 2050.
- 4. Contribute to solving energy and climate change challenges through business operations by deploying innovative process technologies and factoring whole-lifecycle GHG emissions into design and development processes.
- 5. Disclose information through climate change initiatives\*3.
- \*1 Scope 1 emissions are GHG emissions directly generated by MGC. Scope 2 emissions are indirect GHG emissions associated with use of energy (mainly electric power) purchased from external suppliers.
- \*2 Scope 3 emissions are indirect GHG emissions generated in supply chains through organizational activities such as raw material sourcing, manufacturing, distribution, sales and waste disposal.
- \*3 MGC proactively participates in various collaborative activities to mitigate climate change (climate change initiatives).

#### **Greenhouse Gas Reduction Targets**

MGC has quantitative set targets for reducing GHG emissions (Scope 1 & 2) and is taking action to achieve those targets.

	2023	2030	2050
MGC Group	-	Reduce by 36% compared to 2013	Achieve carbon neutrality
MGC non- consolidated	Reduce by 28% compared to 2013	Reduce by 36% compared to 2013	Achieve carbon neutrality

#### **GHG Emissions**

#### Results of energy consumption/GHG emissions in fiscal 2021

	Energy consumption	GHG emissions
	(ML crude oil equivalent)	(1,000 tons CO2 equivalent)
MGC Group	658	1,482
MGC (non-consolidated)	378	807
Consolidated subsidiaries	279	675

#### Scope 1 + 2 Emissions

Note: Domestic MGC Group GHG emissions noted only for fiscal 2015 and later.

Note: Overseas MGC Group GHG emissions noted only for 2017 and later.

Note: In fiscal 2020, we reviewed the organizational scope of Scope 1/2/3, and revised the emissions retroactively till fiscal 2013.

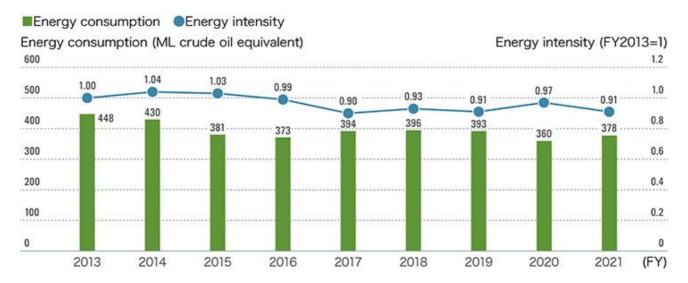

#### **Scope 3 Emissions (MGC Group)**

	0.4	Scope 3 Emissions (1,000 tons CO <sub>2</sub> equivalent)			
	Category	MGC (non- consolidated)	MGC Group		
Cat.1	Purchased goods and services	5,800	7,800		
Cat.2	Capital goods	-	190		
Cat.3	Fuel- and energy-related activities not included in Scope 1 or Scope 2	120	270		
Cat.4	Upstream transportation and distribution	600	700		
Cat.5	Waste generated in operations	5	5		
Cat.6	Business travel	<1	1		
Cat.7	Employee commuting	1	1		
Cat.8	Upstream leased assets	7	7		
Cat.9	Downstream transportation and distribution	150	150		
Cat.10	Processing of sold products	-	_		
Cat.11	Use of sold products	24	75		
Cat.12	End-of-life treatment of sold products	2,100	2,200		
Cat.13	Downstream leased assets	28	28		
Cat.14	Franchises	0	0		
Cat.15	Investments	640	180		
Total		9,600	11,600		

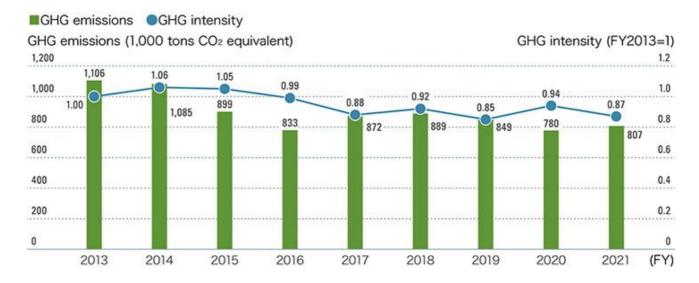

#### **Emission Reduction Initiatives (non-consolidated)**

MGC is committed to energy conservation and reduction of GHG emissions. In fiscal 2021, we improved efficiency by consolidating manufacturing facilities and updating and improving equipment and reduced energy usage and GHG emissions by updating reaction processes. The GHG reduction effects from these measures are equivalent to 7,000 tons of CO<sub>2</sub>. In the future, we plan to update large-scale facilities, review operating methods, recover byproduct fuels for use, and take of the measures.

#### **Energy consumption and energy intensity index of MGC (non-consolidated)**

#### MGC non-consolidated GHG emissions and GHG intensity index

#### Third-Party Verification of Greenhouse Gas Emissions (non-consolidated)

Beginning with the fiscal 2016 report, a third-party organization has verified the GHG emission data reports disclosed by MGC to enhance reliability and transparency.

MGC GHG emissions (Scope1,2,3) have undergone third-party verification and have obtained a verification statement in fiscal 2022.

#### [Scope of Accounting and Verification]

Mitsubishi Gas Chemical Company, Inc., CO<sub>2</sub> emissions, Scope1,2,3(Category2,3,5,6)

#### [Targeted Period]

April 1, 2021 - March 31, 2022

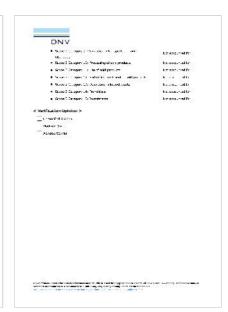

#### [Accounting and Verification Standards]

GHG Protocol Corporate Accounting and Reporting Standard (reviced edition) ISO14064-3:2019

#### [Verification Statement]

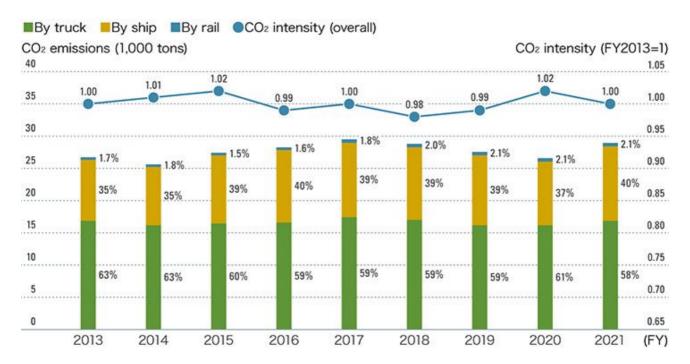

### **Initiatives in the Transportation Sector (non-consolidated)**

In the Transportation Sector, MGC is implementing measures with a focus on modal shifts to more environmentally-friendly transportation methods to reduce energy consumption and GHG emissions. GHG intensity improved by 1.5% in fiscal 2021.

#### MGC transportation sector CO<sub>2</sub> emissions

MGC Group products that contribute to reducing GHG emissions and that help lessen society's impact on the environment are featured on the Spotlight on Eco-Friendly Products page.

#### **Water Resource Conservation**

MGC recognizes that water, a blessing of nature, is essential for business activities, and that it is important to enable sustainable use of water without compromising on water quality, and is working on a variety of relevant initiatives.

#### **Water Resource Risk Management**

MGC uses large quantities of water, both as a raw material for manufacturing chemical products and for various other purposes, including steam-heating and cooling in chemical manufacturing processes, and as water for product refining and for cleaning product containers. In this way, MGC recognizes that it is essential to provide sufficiently high-quality water in continuing its business.

To sustainably use water resources essential to manufacturing chemicals, MGC manages a variety of risks. Specifically, MGC monitors its actual water consumption and uses water efficiently by measuring water withdrawal, water discharge, water usage and water recycling. In drawing from water sources, MGC restricts its intake to permitted quantities in accord with applicable laws or agreements with municipalities. Additionally, MGC discharges wastewater into rivers, the sea or other public water bodies in compliance with required effluent standards after treating it to filter out identified pollutants. Data on these water-related environmental impacts are published in "Pollution Prevention" page and "Sustainability Data Book".

Additionally, MGC maintains a sanitary water-use environment at all its sites to provide MGC employees and the employees of our partners with access to properly functioning, safely managed sanitary facilities (wash service).

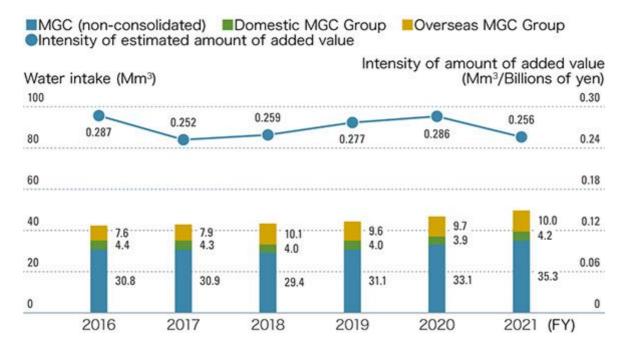

From a business continuity standpoint, production downtime due to drought or flooding of production facilities have been identified as a water-related risk at each production site. Each production site has formulated the business continuity plan (BCP) that addresses this risk and implemented measures to mitigate it. None of the river-basins in the areas in which MGC's plants are located has experienced either adverse impacts on production activities due to water stress or conflicts with stakeholders regarding use of water resources.

As for water-related opportunities, businesses developed by MGC and its Group companies include businesses that provide solutions for issues surrounding the coolant water of air conditioning equipment and cooling systems. We provide solutions to water issues, such as water treatment agents that have the effect of sterilizing disease-causing legionella bacteria and that maintain healthy coolant water quality, and a comprehensive water treatment system service offered through affiliate Dia Aqua Solutions Co., Inc.

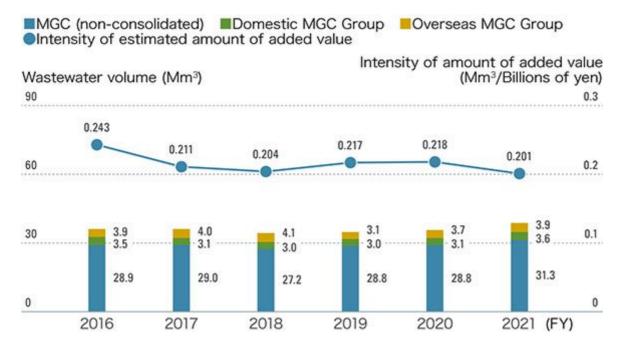

Going forward, MGC aims to achieve qualitative and quantitative targets for efficient water usage established in the RC Medium-term Plan 2023 (2021–2023), to more effectively preserve water resources.

#### Water Intake / Wastewater Volume (MGC Group)

#### Water intake/Intensity of estimated amount of added value

#### Wastewater volume/Intensity of estimated amount of added value

<sup>\*</sup>For the data for the overseas MGC Group, the total value for the calendar year is added as is in the fiscal year value.

<sup>\*</sup>The data for the overseas MGC Group comprised 13 companies at 15 locations in 2016, and 14 companies at 16 locations in other years.

#### Waste Reduction and Resource Recycling

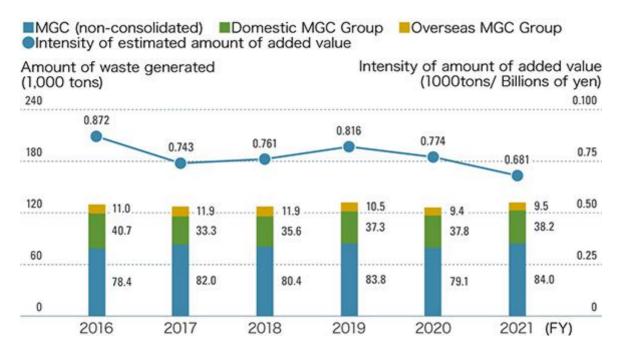

Each MGC Group company is striving to reduce waste by promoting the 3Rs of waste (Reduce, Reuse, Recycle), and to undertake the proper disposal of waste in accordance with law.

#### **Basic Approach to Resource Use**

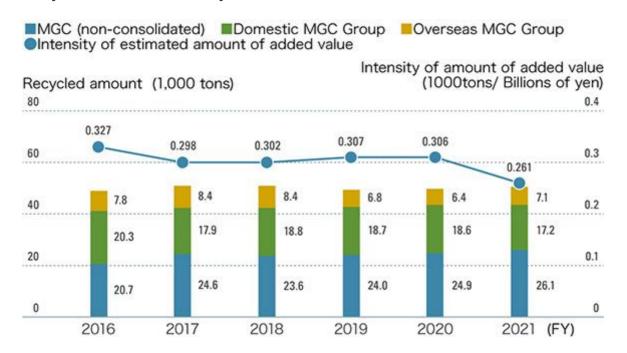

The MGC Group promotes efficient utilization of fuel and other resources (including product raw materials) and development of innovative process technologies at its domestic and overseas production sites and contributes to reduction in GHG emissions.

#### Reducing Waste (MGC Group)

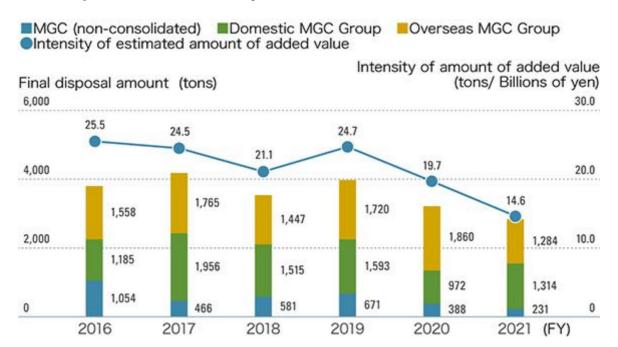

#### Amount of waste generated/Intensity of estimated amount of added value

#### Recycled amount/Intensity of estimated amount of added value

#### Final disposal amount/Intensity of estimated amount of added value

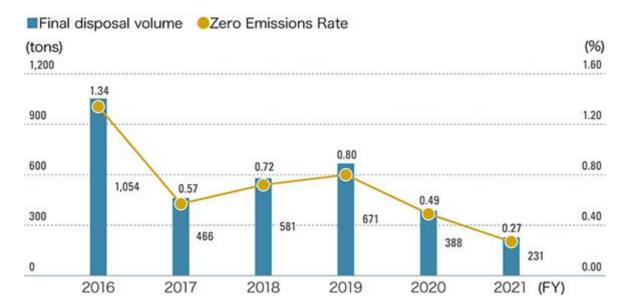

#### **Zero Waste Emissions Rate (Non-consolidated)**

MGC (non-consolidated) defines zero waste emissions rate by dividing the final disposal amount by the amount of waste generated and is working to reduce the rate. The zero emissions rate is positioned as a KPI in the "Grow UP 2023" plan, and the target for fiscal 2023 is 0.3% or less.

The zero emissions rate in fiscal 2021 was 0.27%. This was the result of a decrease in the release of residual soil from wastewater treatment facilities, which was a temporary factor, and the absence of sludge occurring in projects.

#### Final disposal volume and Zero Emissions Rate (Non-consolidated)

#### **Chemical Emission Reduction**

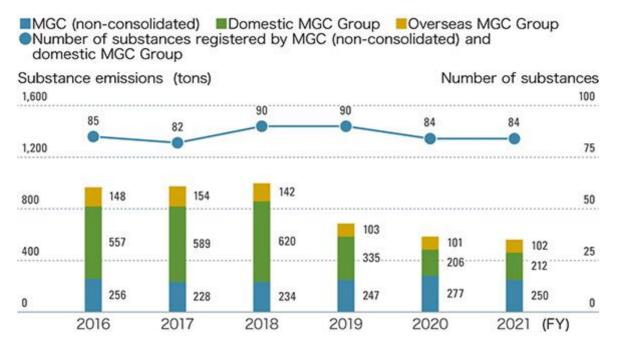

Each MGC Group company assesses and submits notifications on substances subject to the chemical substance emission notification system of the country in which it is based (PRTR in Japan), while working to reduce the amounts released and transferred.

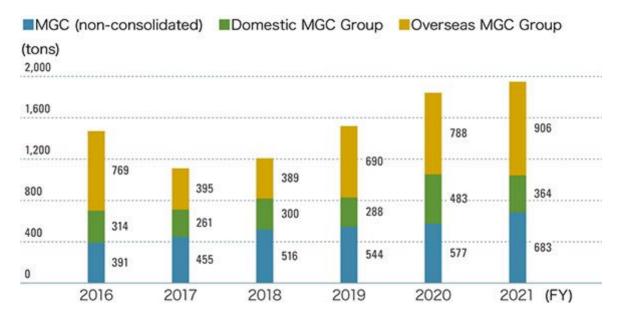

### **Substances Subject to Notification under the PRTR Law (MGC Group)**

Many countries have systems that require notifications regarding chemical substance emission in a similar way to Japan's PRTR Law (TRI in the US, etc.). In its tabulation, MGC has aggregated substance emissions reported by the non-consolidated MGC and by domestic MGC Group companies based on the PRTR Law, and emissions reported by overseas group companies under the laws of their respective countries and regions for substances listed under Japan's PRTR system or for which there is a CAS number.

#### **Substance emissions (in accordance with the PRTR Law)**

#### **Substance transfers (in accordance with the PRTR Law)**

<sup>\*</sup>Past data has been reviewed and numerical values have been corrected.

# High-emission Substances Notified under the PRTR Law (Non-consolidated MGC and Domestic MGC Group)

Among the substances notified under the PRTR Law, those listed below were emitted by the non-consolidated MGC and domestic MGC Group in total in amounts of 10 tons or more.

Government-	Substance	Emissions (tons)				
designated number		FY 2017	FY 2018	FY 2019	FY 2020	FY 2021
128	Chloromethane	567	590	308	187	188
296	1,2,4- Trimethylbenzene	99	113	162	162	121
186	Dichloromethane	78	87	74	78	69
80	Xylene	24	17	20	11	29
300	Toluene	14	12	14	14	15

#### Japan Chemical Industry Association PRTRtargeted Substances (Non-consolidated)

The Japan Chemical Industry Association (JCIA), of which MGC is a member, has specified 328 Class I Designated Chemical Substances stipulated by the PRTR Law, and a JCIA-specified 90 substances plus 1 substance group as voluntary PRTR-targeted substances considered volatile organic compounds (VOCs). The JCIA tabulates the emissions of member companies, and the entire chemical industry is working toward reducing emissions of these PRTR substances.

The amount of said substances emitted by MGC in fiscal 2021 totaled 70 substances and 315 tons, a decrease of around 10% from the 351 tons of emissions in fiscal 2020. This was due to resolutions of issues associated with exhaust gas recovery equipment in fiscal 2020 and optimization of operating conditions.

MGC will continue its efforts to reduce emissions of chemical substances occurring in conjunction with shutdown of equipments and similar factors, by implementing measures to reduce problems at manufacturing plants and through preventive measures.

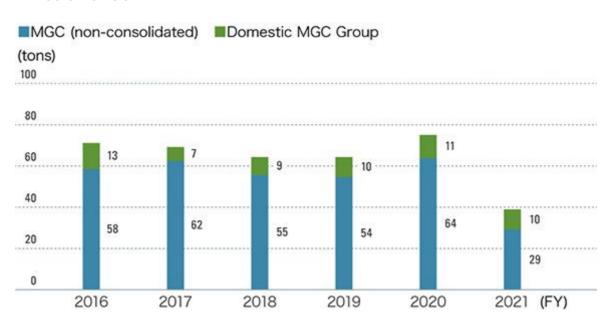

#### **Pollution Prevention**

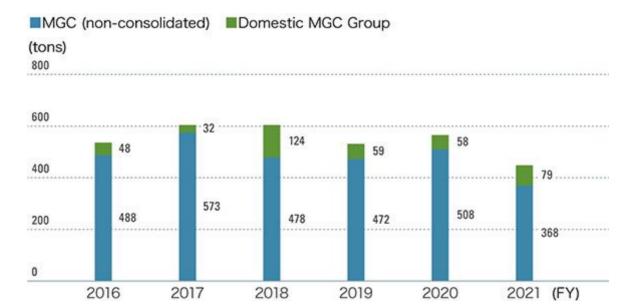

To prevent pollution and to maintain sound habitats for living things, MGC Group companies monitor the volume of environmentally hazardous substances in wastewater and waste gas and work to reduce discharge volumes.

### Preserving Air Quality (Non-consolidated MGC and Domestic MGC Group)

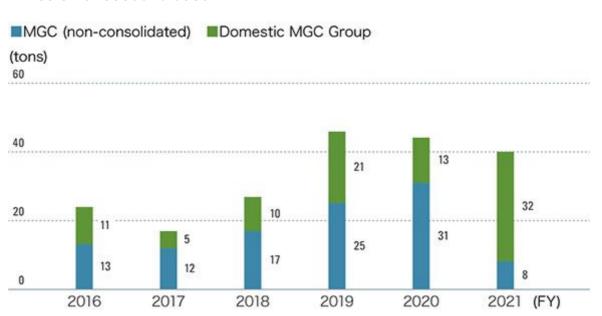

#### **Emission of SOx**

#### **Emission of NOx**

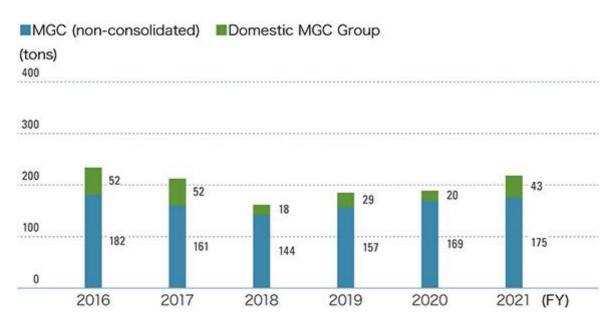

#### **Emission of soot and dust**

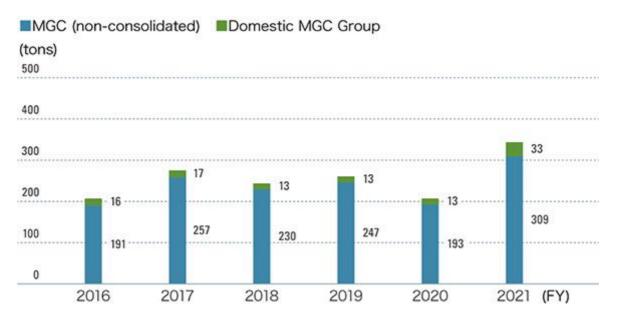

<sup>\*</sup> Past data has been reviewed and corrected.

### Preserving Water Quality (Non-consolidated MGC and Domestic MGC Group)

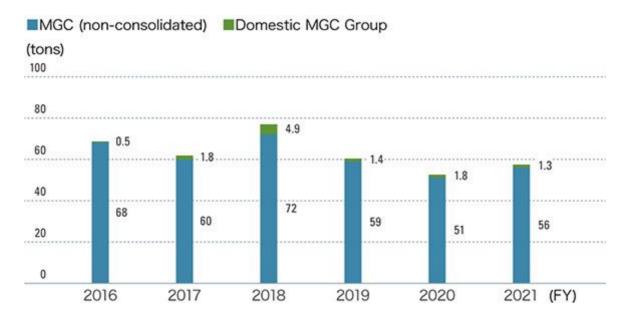

#### **Emission of COD**

#### **Emission of total nitrogen**

#### **Emission of total phosphorous**

#### **Biodiversity Conservation**

#### **Biodiversity Conservation (Non-consolidated)**

Endorsing the aims of the Keidanren (Japan Business Federation) Declaration of Biodiversity, MGC signed on as a promotional partner of the Declaration in 2009. In 2014, MGC became a member of the Keidanren Nature Conservation Committee with the aim of engaging in activities to protect the natural environment and conserve biodiversity.

MGC reliably manages chemicals based on responsible care and strives to conduct operations while taking all possible measures to prevent effects on human health or the health of ecosystems and works to achieve greenhouse gas emissions reduction targets. Through these efforts, we seek to maintain abundant natural environments where wildlife can thrive and increase biodiversity by sustainably using natural capital. Furthermore, we contribute to sustainable development through the development of technology that can be assessed as eco-friendly products, and the proliferation of these products.

We undertake activities that support biodiversity through close-at-hand activities at each plant, such as flower-growing campaigns within plant sites and maintenance of forest preserves in surrounding areas, as well as addressing the issues of plastic in the oceans by cleaning up rivers and harbors neighboring our sites.

#### **TOPICS**

#### "Bookcases for Biodiversity" donation program

We have been cooperating in the promotion of understanding and enlightenment activities on biodiversity through our participation in the "Bookcases for Biodiversity" donation program, implemented by the Japan Committee for UNDB (United Nations Decade of Biodiversity). In fiscal 2021, we donated books to Kawamura Elementary School in Yamakita Town, Kanagawa Prefecture and the View Fukushimagata Water Station in Niigata Prefecture.
